

WHAT IS CLAIMED IS:

1. A structure body of a railway vehicle, comprising:
a side structure body, a roof structure body, and an end structure body,
said side structure body being formed by carrying out a friction stir
welding by arranging plural frame members, and
a connection of said side structure body and said roof structure body
being formed by a MIG welding.

2. A structure body of a railway vehicle, comprising:
a side structure body, a floor structure body, and an end structure
body,
said side structure body being formed by carrying out a friction stir
welding by arranging plural frame members, and
a connection of said side structure body and said floor structure body
being formed by a MIG welding.

3. A structure body of a railway vehicle, comprising:
a side structure body, a roof structure body, and an end structure body,
respective said side structure body and respective said roof structure
body are formed by carrying out a friction stir welding by arranging plural
frame members, and
a connection of said side structure body and said roof structure body
being formed by a MIG welding.
